Certified Nurse Assistant

This training is offered in the Anchorage area. In addition, a Certified Nurse Assistant Reciprocity Course is available. Contact Admissions for more information on this training.

Nationwide there is a shortage of nurses and nursing assistants. As the people of Alaska age over the next 10 years, this shortage is expected to increase. All over our State, healthcare facilities are constantly looking for qualified, skilled, care givers. In response to those needs, AVTEC developed a Certified Nurse Assistant (CNA) program, which is located in Anchorage. We operate two classes simultaneously, one in the classroom and one in clinical, for new Nurse Assistants. They run for eight weeks throughout the year.

The Certified Nurse Assistant program is an intensive, fast paced course that includes 230 hours of classroom, lab skills practice and clinical experience. The first four weeks are classroom and lab skills, including Basic Life Support. Classes are Monday through Friday, from 8:00 a.m. to 2:30 p.m. A one-hour skills practice session is available each day following class and is highly recommended.

The next four weeks of clinical experience are devoted to patient care at one of nursing or assisted living homes in Anchorage. Clinical rotation is from 6:15 a.m. to 12:15 p.m. The first week students care for one person, the second and third week two people, and the fourth week three people. Besides clinical skills, students learn organization and time management while caring for patients.

Program Requirements

To achieve a **Certified Nurse Assistant** certificate, students must complete the following requirements.

Classroom/Skills Lab

Contact Hours: 114
